Category Name Design   **Actionee** HAIS

Sub Category

Subject SCC diagnostic data

Description of Problem or Suggestion:

The current design apparently assumes SCC diagnostic data downlinked via a diagnostic channel consists of static memory dumps for comparison with ground images.

Diagnostic downlinks may include data (e.g. tables from spacecraft memory) which must be decommutated and displayed in real-time.

Originator's Recommendation

Add to the design the capability to decommutate and display TLM data downlinked via a diagnostic channel.
